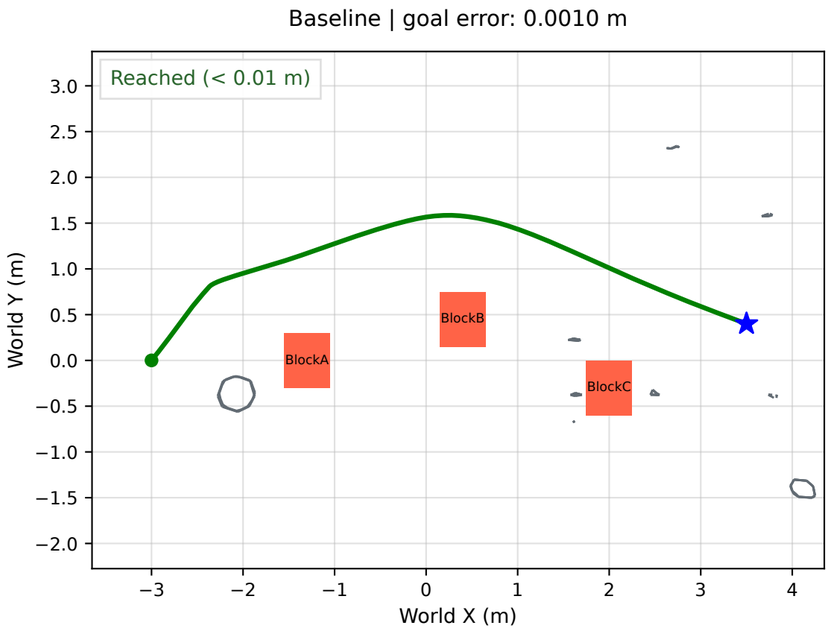
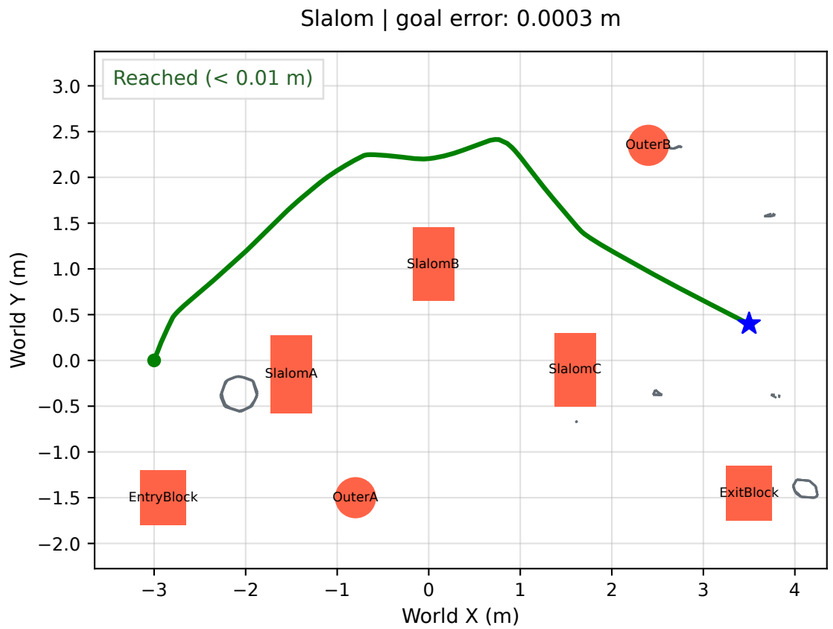
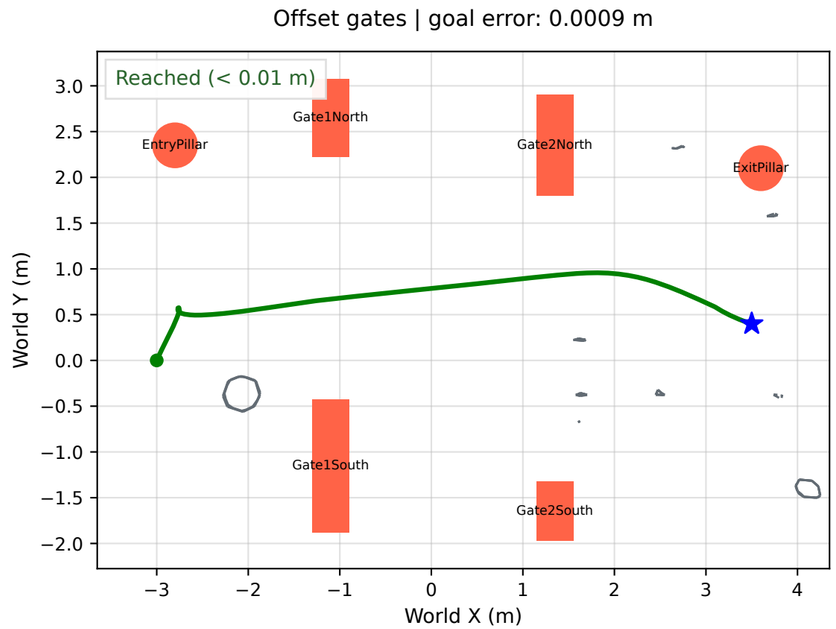
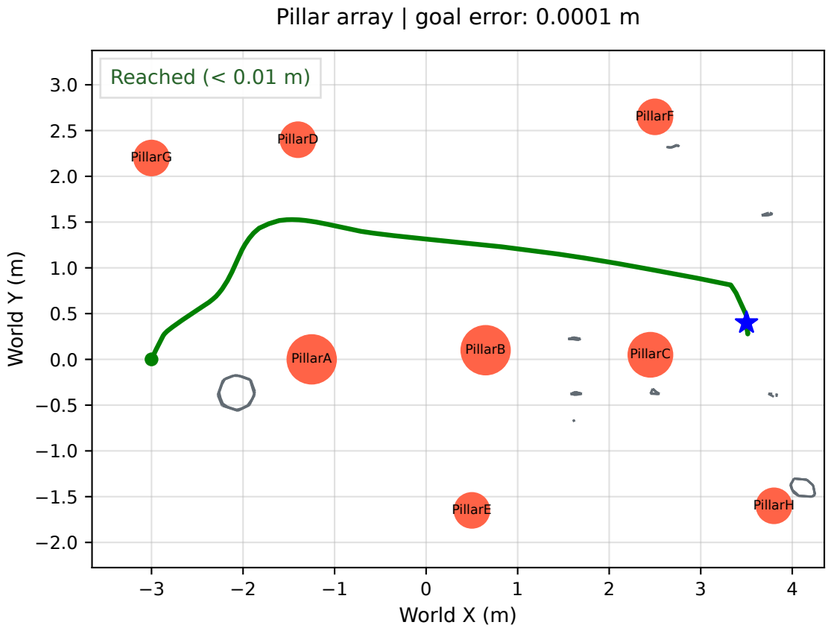
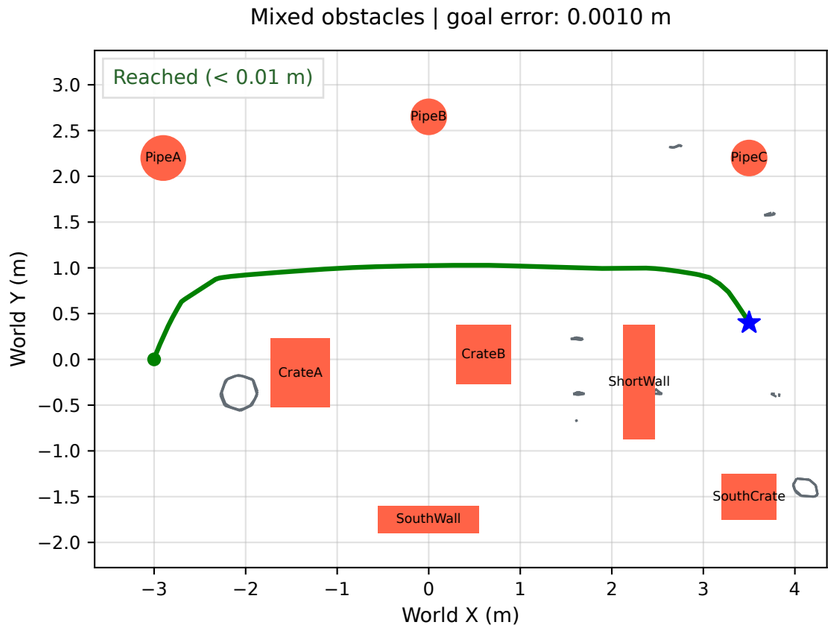
ROV obstacle-avoidance routes across five pool scenarios











Executed ROV path
Start
Goal
Added obstacle footprint
Original pool structures
Final position: not reached

Measured navigation trajectories
Start: [-3.0, 0.0, 1.0] m
Goal: [3.5, 0.4, 1.0] m
Fixed reference height: z = 1.0 m
HFOV: 90 deg; depth stride: 1
Ideal depth + ground-truth odometry
Arrival tolerance: 0.01 m; dwell: 2 s
Simulation budget: 180 s per scenario

Routes are plotted without smoothing
or extending them to the goal.
